Frequently Asked Ferret Questions

Congratulations on selecting a ferret to be a member of your family. The doctors and staff of Glenway Animal Hospital are committed to making sure your newest family member lives a long, happy, and healthy life. To help you get started on the right track, we have put together a list of most-asked questions about ferrets with their answers. This list is not all-inclusive, so feel free to consult with us if you have additional questions.

Where should I house my ferret?

The majority of ferrets spend most of their time in cages so we recommend that you purchase the largest one you can afford. Ferrets like to climb, run, swing, and snuggle so it is good if ample space can be provided in the cage for many of these activities. Kits (baby ferrets) often bite and scratch during play; they should be redirected towards other play activities if they do this. Even with a large cage, ferrets need daily play and exercise time, **AT LEAST 2-4 hours** of out-of-the cage playtime. It is IMPERATIVE that out-of-the-cage play be supervised and held in a ferret-proofed space. Ferret-proofing requires removal of small, shiny and metallic objects, blocking off small openings such as dryer hoses or heating vents, removing toxic materials or potential areas where ferrets could fall or have things fall on them. A common ferret injury is being squished in a recliner chair - so be aware of what and where your ferret can and probably will go.

What should I feed my ferret?

Ferrets are carnivores and need to be fed a diet with at least 30% protein. Our favorite higher protein food (50%) is Natural Gold made by Pretty Bird International. There are many high quality dry and canned ferret foods on the market and these can be supplemented with treats such as Ferretone, cooked chicken or fish (no bones), or commercial ferret treats. We do not recommend

feeding a raw (sometimes referred to as "natural") diet. Sometimes food supply issues necessitate switching brands or flavors, so be sure your ferret(s) will eat more than one brand if it becomes necessary to switch. Sugary, salty, and milk-containing products should be avoided. New thinking is that diets too high in carbohydrates (sugars, starches) can lead to chronic stimulation of the pancreas and pancreatic tumors. Fresh food and water should always be available.

How long can I expect my ferret to live?

The average lifespan of a ferret is 7-9 years. Ferrets are prone to several types of cancer and other medical conditions which can limit the quantity and quality of life so it's important to closely monitor your pet's weight, habits, and appearance and see a veterinarian experienced in ferret care if changes are noted.

Can I take my ferret outside?

Yes, but extreme caution needs to be exercised so that the ferret doesn't get loose (ferrets will die in the wild), injured or otherwise harmed. Keep your ferret on a harness and leash or in a cage. Ferrets that frequent the outdoors are more susceptible to parasites such as fleas, ticks, gastrointestinal worms and heartworms. We recommend using parasite prevention in these ferrets (we like Revolution as it prevents fleas, heartworms, and ear mites). Some ferrets can have allergies to pollens and grasses and are best kept indoors at all times.

Which vaccines do I need to get for my ferret and how often?

Kits (young ferrets) need to have a series of vaccines for canine distemper virus (CDV) between the ages of 6 and 14 weeks, then on an annual basis. Canine distemper virus is 100% fatal if contracted, and it can be brought in on shoes, clothing, or via dogs. Most ferrets have received their first vaccine before they are purchased, but contrary to what many pet owners are led to believe, they are NOT fully vaccinated when they leave the pet store. Ferrets also need to be vaccinated for Rabies at 3-4 months initially, and then once a year afterwards. It is important that ferrets are vaccinated with ferret-approved vaccines (not dog or cat vaccines) and multiple vaccines (ie. both Rabies and Distemper) should never be given together at the same time due to risk of vaccine reaction.

Can ferrets get heartworm disease?

Ferrets, like dogs and cats, are susceptible to heartworm infections. This parasite is transmitted through the bite of an infected mosquito. The adult heartworms live in the heart of the ferrets and because of ferret's small size even 1 or 2 worms can be fatal. To prevent heartworm infections we recommend that all ferrets receive

heartworm prevention each month. Revolution is a topical heartworm prevention that is available at Glenway Animal hospital.

Can I catch diseases from my ferret?

Humans and ferrets are susceptible to the same cold and flu viruses so it is possible for you to transmit these common maladies to your ferret and vice versa. Rabies can be transmitted among any warm-blooded animal. The other common viruses of ferrets, Aleutian Mink Disease (AMD), Epizootic Catarrhal Enteritis (ECE), and cancers can not be transmitted to people.

Will ferrets get along with other pets?

Yes - Ferrets usually get along well with other ferrets, cats and dogs, but of course each animal is an individual and there are cases where they don't get along. New introductions should be monitored closely for signs of aggression; Be sure they will get along before leaving them alone together. You should never have ferrets and birds in the same household as ferrets will hunt and kill birds.

Can ferrets be litterbox trained?

YES! Ferrets have individual preferences for types of litter and usually will select the corner of their cage in which they wish to eliminate (put the litter box there). Unlike cats, ferrets do not bury their droppings, so litter boxes should be scooped twice a day for odor control. "Aromatic" wood shavings (cedar, pine) should be avoided as litter as these can cause problems with the respiratory tract and liver. Scoopable cat litters can also cause respiratory issues. Newspaper pellets are frequently used. Urinary tract disorders, gastrointestinal parasites, or low-quality food can contribute to difficulty in training.

What other equipment or supplies are needed for ferrets?

Water bottle or sturdy crock- or water (ferrets love to spill things)

Pet taxi - for trips to the vet or ferret shows

Litter boxes and ferret-friendly litter

Hammocks, towels, sleep-sacks, blankets - ferrets love to sleep covered up

Toys - Choose toys that cannot be chewed up or have small parts that ferrets can ingest. Gastrointestinal obstruction by toys and other foreign objects (surgery is required) is a common occurrence.

Ferretone or Nutrical - treats that can be purchased at pet stores that ferrets LOVE.

Nail clippers - nails should be trimmed frequently (approximately every 2 weeks) to prevent quick overgrowth. Ask us to show you how if you are unfamiliar with trimming pets' nails.

Ferret shampoo - Even if neutered and descented, ferrets will still have an odor. Bathing helps keep the skin clean and fresh.

Cotton Swabs - for cleaning out that normal, reddish ferret ear wax.

What should I do in case of emergency?

First call our office (662-0224). Our office is open from 7 a.m. to 6 p.m. Monday thru Friday and from 8 a.m. until 12 noon on Saturday. If Dr. Dornbusch Cron or Dr. Rebecca Naas aren't in, our office staff can direct you to another veterinarian that is experienced in ferret care. If your emergency happens after we are closed, call the Cincinnati Animal Referral and Emergency Center (CARE) at 530-0911. Before taking your ferret there, inquire if there is a veterinarian on duty that is experienced with ferret care; not all ER vets are. If the doctor at the CARE Center is uncomfortable with ferrets, Grady Animal Hospital (931-8675) is open 24 hours a day and usually has a ferret vet on staff.

For more information:

- American Ferret Association: National Ferret Organization - laws, guidelines for vets, www.afa.com, for information for owners.

Once again, congratulations on the arrival of your newest family member! If all of your questions have not been answered please call us at 662-0224. Our office is open:

**Monday thru Friday 7 a.m. to 6
Selected Saturdays 8 a.m. to 12 p.m**
